- ◆ Instant and easy to use
- ◆ Lenses have internal lighting (except 1-10x)
- ◆ 11 lens options from 1x - 400x; regular, Hi-res, polarized lenses available
- ◆ Optional accessories include stand, tripod, stage adapter, c-mount adapter, carrying case, collection and display set, teacher resource CD, laptop hood for outdoor use.

.....| **SCALAR**

Comes with software and USB cable for MAC & PC computers

Touch & View lenses allow you to magnify images by touching them with the microscope lens tip or for working from a distance twist the tip for non-contact viewing of an object. Focuses instantly. No knobs to turn or squinting through an eyepiece.

The ProScope is a hand held video camera with interchangeable lenses that displays video images on any USB Macintosh or PC. The included USB Shot software for the Mac and PC allows screen display and production of single frame captures, video movies and time lapse photography.

Since it is powered by the USB connection there is no power cord and when used with a notebook computer it is completely portable, allowing hand held microscopic and macro imaging anywhere you go!
