

Moisture on the Skin

- You can measure the skin's moisture content quickly and easily.
- The moisture content is indicated by a number. This can help make your advice about skincare more persuasive.
- You only need to press the meter to the area you want to measure for several seconds so it won't interrupt the flow of your counseling.
- This light, compact meter can be used anywhere.

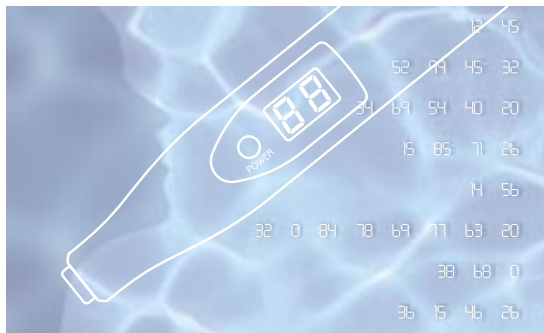

MoistSense

Moisture meter

Easily check the skin's moisture content.

Moisture is the key to beautiful skin.
You can quickly and easily check the skin's moisture content with this meter.

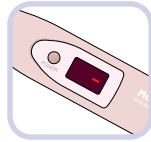

Moisture is the key to beautiful skin.

A lack of moisture on the horny layer causes dry skin, damaged skin, fine lines, and rough-textured skin. The Skin Moisture Sensor indicates the moisture content on the horny layer by a number. This helps you to give your customers the best possible advice.

MoistSense

Moisture meter

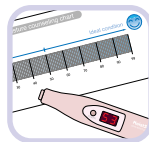

How to test

Turn on the power and see if a “-” appears.

Press the meter to the skin until it beeps.

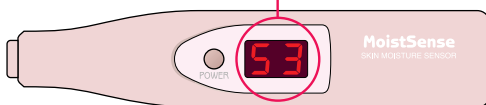

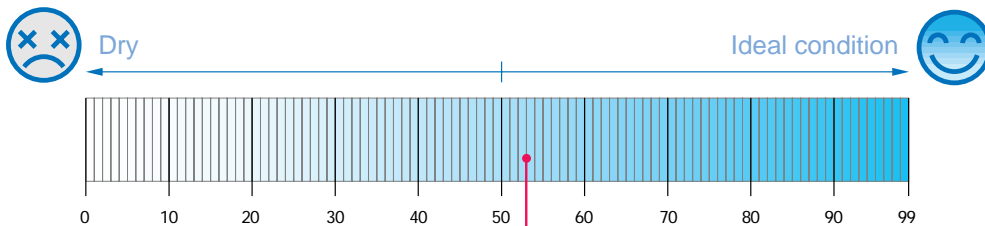

Check the results using the chart.

Recommend skincare products that best suit the customer's skin condition.

Moisture counseling chart

The result is indicated by a number.
Please look at the chart to check moisture content.

Give your customers advice about how to moisturize their skin. This will help them to improve its condition or keep it in an ideal condition.

* Specifications and appearance of the product may be changed to improve it without notice.
