

MS-500C Micro-Scopeman

VIDEO

INSPECTION

SYSTEMS

The MS-500C Micro-Scopeman is a high resolution tool suitable for both real-time industrial inspection and QA

tasks as well as specialised image capture for image processing purposes.

The flexible handheld probe incorporates both camera head and fibre optic lighting for fast and simple acquisition of the perfect image with unrivalled depth-of-field. The colour video image can be viewed directly on a monitor or TV set or

Optional mounting stand

captured by a video printer or computer for hardcopy printing and analysis.

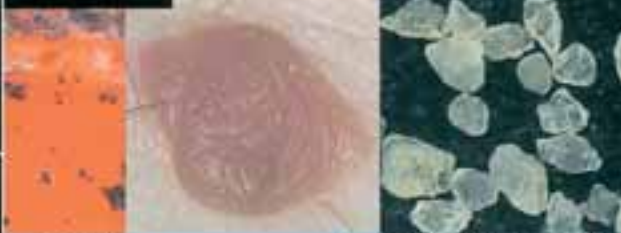

A range of interchangeable fixed magnification and Zoom lenses is available for most applications. Options include automatic light intensity control and fine adjustment of the CCD camera controls. A separate strobe light source is available for capturing very fast moving objects.
